PERSONAL PROFILE

I am a former caseworker with a passion for creating innovative and performant applications that add value to people's lives. This passion propelled me to learn a vast range of modern technologies with the aim of creating solutions to difficult problems. My long term goal is to become an effective full stack developer.

SKILLS

HTML & CSS	JavaScript
React JS	Sass
Node.js	Express
Bootstrap	Tailwind
Git/Git Workflow	NPM

HOBBIES

I am an avid traveller, having spent a considerable amount of time travelling through Asia and going on plenty of hiking trips in the UK. I am also passionate about fitness, where you can find me at my local gym on most days.

MOHAMAD FARUK

WEB DEVELOPER

WORK EXPERIENCE

Web Developer
August 2021 - present

- Developed a visually appealing, user-friendly website for a local business. As a result, online sales and customer interaction increased significantly.
- Implemented web page designs when writing code in accordance to client specifications.
- Conducted website tests and debugged code where necessary.

Case Coordinator
Nursing & Midwifery Council | Aug 2019 - Apr - 2022

- Managed progression of over 200 cases so they are concluded within key performance indicators. This required proven time management skills and organisation in order to prevent delays.
- Used my excellent problem solving skills to complete investigation work as part of my case management duties.
- Handled sensitive information in line with GDPR protocols.

Case Administrator
Nursing & Midwifery Council | Mar 2018 - Aug - 2019

- Used my report writing skills to prepare complex legal documentation in accordance with legal procedures.
- Adopted my numeracy skills to manage witness financial reimbursement in line with company's budget restrictions.

PROJECTS

See Projects: https://www.mohamadfaruk.com/#projects-section

Movie Watchlist App
A React application that fetches data from a movie database API. It dynamically renders information on movies and tv shows. This information is displayed on a modal, which prevents users from being taken to another page. As an added feature, you are able to add movies/tv shows to a watchlist, which is saved to local storage.
Live version: **https://movie-database-self.vercel.app/**

Shopping Website
A E-Commerce website that allows users to add products to a shopping cart and calculates the total cost of all items added. Utilises local storage so the products are saved whenever the page is refreshed. This project was built with HTML, CSS and JavaScript.
Live version: **https://shopping-website-rose.vercel.app/**

Box&Burn Website
A website I built for a fictitious Sports Fitness Company. I created a professional website design to test my front-end skills using HTML, CSS and JavaScript. The website includes smooth scrolling and a hamburger navbar for an intuitive user experience regardless of what device the website is being accessed on.
Live version: **https://boxfit-landing-page.vercel.app/**

Note Keeper App
A simple React CRUD application which allows users to create notes for display. As is the case with CRUD apps, they are also able to read, update and delete notes. This project was an opportunity to practice React Hooks.
Live version: **https://note-keeper-app.vercel.app/**

EDUCATION

Web Development Framework
Zero to Mastery Academy | Jan 2021 - Dec 2021
- Exposed to a range of inustry standard languages and technologies such as JavaScript, React, Node.JS and Express.
